Vergeet de kredietcrisis, het is niet vergeleken met de problemen die nog gaan komen. Dit zegt topeconoom Jeremy Rifkin in een exclusief interview met EenVandaag.

http://www.eenvandaag.nl/binnenland/35444/topeconoom_rifkin_niemand_ziet_de_c...

Volgens Rifkin hangt alles af van de vraag; hoe we met energie omgaan? Blijven we vasthouden aan fossiele brandstof dan staat het voortbestaan van de mens op het spel.

Gaan we over naar een duurzame samenleving waarin iedereen zelf energie opwekt en uitwisselt dan hebben we een kans om te overleven.

Hij baseert zijn 'Third Industrial Revolution' op vier pijlers:

1. de productie van hernieuwbare energie
2. de herinrichting van de gebouwen zodat deze instaan voor hun eigen energieverbruik en beperking van hun CO²-uitstoot
3. de opslag van energie om plotse uitvalen op het energienetwerk te voorkomen
4. de verdeling van de energie via smart grids waarbij elke gebruiker ook leverancier wordt.

Deze vier pijlers vindt Rifkin terug in Vlaanderen in Actie, het toekomstplan waarmee de Vlaamse Regering naar de top vijf van Europese regio's wil tegen 2020. De Vlaamse doelstelling om tegen 2020 minstens 13 % van de totale energievoorziening uit hernieuwbare energie te halen, springt het meest in het oog.

Binnenkort nemen Jeremy Rifkin en minister-president Kris Peeters weer contact met elkaar op. Ook Vlaams minister van innovatie Ingrid Lieten en Vlaams minister van energie Freya Van den Bossche zullen hierbij betrokken worden. Op de agenda staan dan de mogelijkheden bij een eventuele samenwerking met Jeremy Rifkin in verband met de verdere uitbouw van het Vlaamse energiebeleid.

[@sylve6](#) self regenerating yes, but it takes an extremely long time before oil is created.

[DubstepOverdose](#) 3 hours ago

[@DubstepOverdose](#) Yes indeed no shortage at all. It is second biggest liquid after water. and we fucked up because same people controls media. search on YouTube Gulf Oil is NOT Fossil Fuel.. It is an Abiotic - Self Regenerating Compound!.flv

[sylve6](#) 3 hours ago

1. Energy – bullshit
2. CO2 – bullshit
3. Vegans dream, beef – bullshit

4. Everything is done for money which is created by man as idea how to make differential advantage from each other and as in monopoly game: few guys fuck everybody ells

Crisis is in the monitory system and politicians will keep established positions for them self, they don't care about you at all. They don't want any changes and usually don't have education to solve any problems. But they are good at talk bullshit.

[sylve6](#) 4 hours ago

We kill all live on area and grow 1-2 sorts of craps which will be feed to cows living and tortured on concrete. Do you know that on the same area of wild land (home for many plants and animals) you can breed same amount of cow –hi quality bef.

We don't do that, because you can sale oil as fuel and fertilizers. It's not climate change, but we literally change undomesticated nature in to a desert for profit.

[sylve6](#) 4 hours ago

[@sylve6](#) no shortage of oil?? it IS not infinite. there is a limited amount. even if there still is a lot, maybe more than we think so, it's going to run out someday. so we need to switch. you are too paranoid for your own good. goodbye

[DubstepOverdose](#) 4 hours ago

[@DubstepOverdose](#) I agree he talks grammatically correct English every thing els is bullshit is no shortage on oil at all and never was, is fraud like CO2. Money in other hand is a tool to fuck with people in the first place.they are printed out of air by private institutions and US military forces accept them for oil. Why oil can't be traded for something els? Saddam tried sale fore €. ,Gaddafi try for gold you see what happens? think, hes claims has no references, accept nice out fit.

[sylve6](#) 4 hours ago

[@Monscent](#) well.... he doesn't

[DubstepOverdose](#) 5 hours ago

[@DubstepOverdose](#) Yeah, but that little mention wasn't really what I was looking for. He was talking about how the wind doesnt blow and the sun doesnt shine constantly at any given place. What I mean is that there are places where there is not enough wind/waves/sun for extended periods of time. You have to adapt the energy source to the location. Furthermore, solar panels, wave power units etc takes alot of energy to build today, they are not efficient. Where did he mention that?

[Monscent](#) 6 hours ago

[@Monscent](#) at 18:48 he says the sun isn't always shining and the wind doesn't blow all the time... pay attention my friend :)

[DubstepOverdose](#) 7 hours ago

[@sylve6](#) he doesn't base his entire lecture on what he knows from media. independent reports and scientific studies are what he bases on mostly
