Full Text

The addition of aluminium to plastic propellants has resulted in a marked improvement in performance over the whole range of burning rates, 0.1 to 1.65 inch/sec. (at 1000 p.s.i.). In particular, high measured specific impulses (at least 245 lb.sec/lb) and high thrust efficiencies have been obtained with propellants burning at rates above 0.6 inch/sec. at 1000 p.s.i. and containing up to 18 per cent aluminium. Lower burning rates have been ...
