Shale Gas in Northern BC and elsewhere...

Quicksilver Resources Initiates Midstream Operations for Horn River Basin Development

Posted on [April 18, 2011](#) | [Leave a comment](#)

Quicksilver Resources said Friday it has signed transportation deals that will allow it to scale up production from northeast British Columbia's Horn River basin.

In a company press release Toby Darden, Chairman of the Board of Quicksilver states;

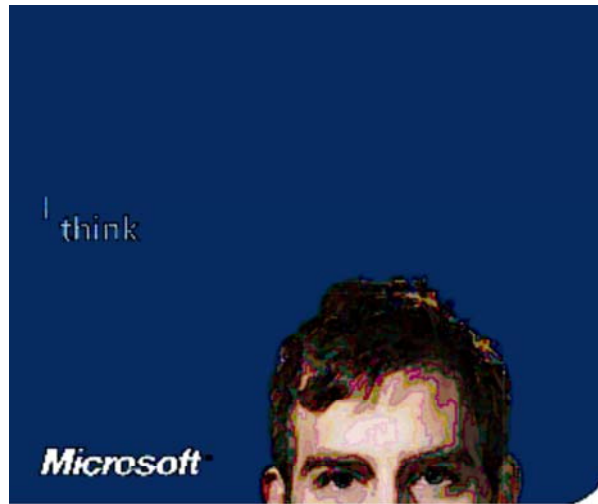

"We expect the company's value creation strategy for the midstream business will be accretive to our oil and gas returns, as was the case in the Fort Worth Basin through our successful implementation of our midstream strategy. We have the pieces in place to ensure that our vast resource capture will move out of the Horn River Basin to the west through the Spectra system and to the south through the Trans Canadian pipeline system. We believe that creating this midstream entity will provide our lowest cost solution for gathering, treating and transporting our commodity to multiple sales points."

According to a recent Calgary Herald article:

Quicksilver vice-president Rick Buterbaugh said current production of about 20 million cubic feet per day is constrained by limited access to third-party pipelines. The tie-ins will ensure adequate capacity to ramp up production to 2014 and beyond. "This gives us multiple outlets for our gas. We're always looking for a variety of markets to move gas to."
