**OPERATIONS**

**Aerial Firefighting**

When it comes to flying and operating specialized aerial fire suppression aircraft, Conair's reputation is second to none. Our pilots boast an average total time of over 7500 hours and collectively log more than 6,000 hours over a summer contractual period. Conair's full service ground crew specializes in maintaining our company's own fleet of fixed wing firefighting aircraft as well as a variety of customer owned aircraft.

To maximize our ability to deliver continuous aerial fire management protection to our customers, Conair also provides a full suite of aerial firefighting support services by;

- Designing and building fire retardant delivery systems.
- Conducting aircraft conversions and modifications for fire control service organizations.
- Providing engineering support services.
- Designing, building and certifying aeronautical fire suppression products.
- Providing product support for specialty operators, both on and off site.
