Developing a Plan B for Climate Change

[Download audio \(MP3\)](#)

Photo: NASA/GSFC

This week in Monterey, an international group of scientists and policy makers are meeting to set some ground rules for what many are calling "Plan B" for dealing with climate change. There is already more CO2 in the atmosphere than many scientists say is healthy for civilization as we know it. If levels keep rising, some think we might need an emergency brake.
Reporter: Craig Miller & Gretchen Weber

This production sounded way to much like a fox CBS piece.
Cross cut audio, sound effects, finishing the sentence of the interviewee.
Way too cutsie. It is demeaning of the story and makes the interviewer sound like a teener.

Slap this producer.

Charles Albert

This is a generally intelligent and well-done look at a very problematic idea--one hopes that no policy maker of any real power ever takes this Plan B seriously, so it is important that people are aware it is under serious study.

The delivery of the piece was a little lacking--I think the scripted banter was more appropriate for the AM radio crowd than for the audience of KQED.
