PM

Nakata/APA one-year-old boy is re-checked for radiation exposure after being decontaminated in Nihonmatsu, Fukushima, northern Japan on Monday. A third reactor exploded late Monday at the Japanese nuclear plant crippled by Friday's

earthquake, releasing a dangerous amount of radiation, officials said.

A fourth reactor was on fire and there were fears that the steel containment vessel protecting the plant's nuclear core had been breached - the worst-case scenario in such situations.

"There is a very high risk of further radioactive leaks," Prime Minister [Naoto Kan](#) said in an address to the nation. "I ask you to stay calm."

More than 180,000 people living in a 12-mile radius of the [Fukushima](#) Daiichi plant 150 miles north of [Tokyo](#) had already been evacuated over the weekend.

Kan asked that people living between a 12- and 18-mile radius hunker down inside.

"Remain indoors, at home or in your offices," he said. "Avoid going outside."

Officials evacuated staff plant after reactor No. 2 exploded - the third blast there since Saturday.

A heroic team of 50 workers stayed behind to continue trying to cool the reactors with seawater and avert large-scale meltdown.

"They are putting themselves in a very dangerous situation," Kan said.

[Japan](#) asked the [United States](#) for help after reactor No. 3 blew earlier in the day, injuring 11 workers. The blast was so large it could be felt 25 miles away.

Reactor No. 1 exploded Saturday.

The explosions were caused by a buildup of hydrogen as the fuel rods overheated.

Experts had said the thick steel container protecting the reactor's radioactive core was holding fast, but Tokyo Electric said the third blast may have caused a leak.

The U.S. [Navy's 7th Fleet](#), stationed more than 100 miles away to help earthquake victims, sailed farther away from the stricken plant after detecting unusual levels of radioactivity in the air.

Seventeen chopper crewmen who flew through a radioactive plume 60 miles from the plant were contaminated and had to be scrubbed down.

At the [White House](#), Nuclear Regulatory Commission head [Gregory Jaczko](#) assured Americans that there was "a very low likelihood" of harmful levels of radiation reaching [Hawaii](#) or the West Coast even in case of a meltdown because of the distance from Japan.

He said the NRC sent two nuclear experts to Tokyo

[President Obama](#) said the U.S. is prepared to offer all necessary aid. "We will stand with Japan in the difficult days ahead," he said.
