## VIDEO: VIDEO GALLERY

VIDEO TRANSCRIPT

These images, taken from a robot at Japan's stricken Fukushima Daiichi nuclear plant, show highly radioactive steam rising from a pipe in the ground. Tokyo Electric Power Company officials say the latest readings, taken from inside reactor number one, are the highest recorded since a tsunami hit on March 11. At a maximum level of 4000 milliseverts per hour, a worker inside could die if exposed for more than an hour. Months after the devastating earthquake and tsunami Japan, the company is still struggling to contain radioactive leaks from the plant. At reactor number two, fire trucks have been brought
