Plumes of Cesium 137, Iodine 131, and Xenon 133, have reached the United States as of March 23, 2011.

Higher plumes, reaching 5000 meters (15,000 feet) are forecast to reach Portugal, Spain, and central Europe.

All animations are from professional forecasting services. Links are below.

<http://www.wowweather.com/weather/news/fukushima?LANG=us&VAR=hysplitheight>

The radiation flow, forecast and shown by these several models... tells the tale of the isotopes coming our way... .. it will be up to you to decide if you should go outside during the time these clouds are over the USA, Canada, and Mexico...

Respond to this video...

lol I can't keep up with these updates anymore. O\_O

But thanks Dutchsinse for your great effort!

[Veivari27](#) 1 minute ago

And it explode when in touch with water, cesium is the most dangerouse shit. I feel sorry for Japan and i won't be afraid to call it Apocalypse.

[natalencja7676](#) 14 minutes ago

Casium 137 stays in the air for 30 years....

[natalencja7676](#) 17 minutes ago

Thanks for doing what you do, man.

[jcx420](#) 25 minutes ago

go to [www.dotwoweather.com](http://www.dotwoweather.com), (weather online) and click on the right where it says Cloud spread Fukushima. i dunno if you've seen this one dutch, but it's kinda interesting.

[dizzy1369](#) 1 hour ago

[@thalonelygirl](#) lol

[siesprowse](#) 1 hour ago

Anyone see a parallel here with oil well that we all spent two months watching gush into the gulf of mexico? A poisoned ocean? A poisoned atmosphere? Time for renewables yet?

[cawright2007](#) 2 hours ago

How much radiation will fall on the bread basket area of the US? How will it affect the food supply here, in the US? Will our glorious leaders raise the safe exposure limit so will can still be safe?

[WDDeet](#) 2 hours ago

thx for this info!

[Unh0lymystic](#) 2 hours ago

hey dutch another 2.2 quake about 20 miles from me- i felt this one slightly- this is now the third one in 28 hours near me- theyre small but activity is on the upswing for sure
