PG&E customers can delay SmartMeter inst

Delaine Fragnoli Managing Editor 5/4/2011

meters in Plumas County last month.

PG&E customers who have safety or other concerns about SmartMeters can now do installation.

The company announced April 25 that customers who have not yet received a Small temporarily delay the installation of their new meter. PG&E began installing the cont

Customers who wish to postpone their SmartMeter installation can do so by calling ϵ -free number: (877) 743-7378. There is no fee associated with this delay.

Under pressure, PG&E filed a proposal with the California Public Utilities Commissic March that, if approved, would provide customers the option to turn off the radios in SmartMeters. The commission is currently reviewing the proposal.

If the commission approves PG&E's radio-off option, customers who have requested would still receive a SmartMeter, but they could have PG&E turn off the radios in the that option comes at a cost: an up-front fee of \$135 - \$270 and a monthly cost of \$1 meter reader to come out and read the meter. These fees would be in addition to cu regular monthly energy bills.

Critics say the radiation from the wireless meters poses a health risk. PG&E spokes Moreno said the devices emit 1 watt of power and transmit for 45 seconds a day exposure that would take 1,000 years to equal a typical month's worth of cellphone also argue that radiation from cellphones endangers users' health. Groups like Stop are holding out for the return of analog meters.

The SmartMeters have also come under fire for being inaccurate and causing custor skyrocket. PG&E claims an independent third-party study has verified the accuracy meters. Moreno said that over time some of the old analog meters slow down, result reporting of energy use and artificially low bills.

Local Bargains

Background

The SmartMeters attach to traditional electric meters and record hourly meter reads periodically transmitted via a dedicated radio frequency network to PG&E. The techn of the CPUC's effort to upgrade the state's energy infrastructure.

SmartMeter installation began in southern and central California, where it has suffer backlash. The CPUC has received hundreds of complaints from customers, and Bal customers have filed a class action lawsuit. Assemblyman Jared Huffman introduce currently on hold, that would compel PG&E to offer an opt-out.

Complaints about the meters include the loss of jobs (meter readers will no longer b much higher electric bills and loss of privacy (the company can tell what appliances using when).

PG&E has said there is nothing wrong with the meters and the higher bills are a resifactors: rate hikes, summer temperatures and customers not shifting their use to offwhen rates are lower.

The promise of SmartMeters is that they will allow customers to monitor their electric can make more informed decisions about energy conservation.

The problem: Currently, PG&E's meters do not have any in-home energy managem dashboards, so customers don't know how much energy they are using. PG&E does install these in the future.

One industry observer has cautioned that if there is too much of a lag time between the SmartMeter and installation of the monitoring technology, the "consumer starts to disenfranchised."

Others in the utilities industry warn that companies like PG&E need to educate cons time-of-use rates. Under this model, consumers are charged a different rate according they use electricity. Shifting use to low-demand times results in lower rates, thus delipreventing construction of expensive new power plants and preventing the need for

#2 RE: PG&E customers can delay SmartMeter installation — Inside9 2011-05-04 08:46

The "benefits of smartmeters" are still theoretical but the observed suffering is documented. A benevolent government would stop in the face of thousands of reports and consider other alternatives in promoting energy efficiency.
