(NaturalNews) Today, I spent my time interviewing people on the Gulf Coast from Mississippi to Louisiana. Several of those interviews were conducted on camera, and you'll be seeing those videos as early as tomorrow here on NaturalNews.

Interestingly, it turns out that a lot of the people living on the Gulf Coast have a history of working with oil companies -- and even on oil rigs. I spoke to several people who have a work history with BP, and two of them told me they are certain that British Petroleum is NOT trying to stop the oil coming out of the well. What they are trying to do, I was told, is SAVE the oil well so that they can capture the oil and sell it.

This claim stands in direct contradiction to what BP says. The company insists it's trying to stop the flow of oil from the well. But if you look at BP's actions, what they're really trying to do is siphon off the gushing oil where it can be pumped to a tanker ship and sold as crude. It is a simple matter, by the way, for oil companies to separate water from oil. They do it all the time in oil fields all across America. So if they can siphon off the oil from the Deepwater Horizon well -- even if it's mixed with water -- they can sell it for potentially billions of dollars.

It raises the question: Is the economic promise of captured oil causing BP to avoid using its best effort to cap the well?

Tapping, not capping

Notice that the new device they're lowering onto the well is designed not to close it off but to pump the oil to an awaiting ship. This is a plan to "capture" the oil, not to seal off the well.

The mainstream media hasn't picked up on this yet, by the way. To my knowledge, no one is yet reporting this story that BP may have never had any intention of actually capping the deep sea well.

We already know BP has been extremely dishonest with the media about this entire situation. By distorting the truth and lying to the public, BP has lost all credibility with almost everyone (Governors, Senators, journalists, etc.). So how can we trust that BP is actually trying to cap this well when there's so much money to be made from allowing it to keep spilling oil that can soon be captured?

In other words, it's in BP's financial interests to avoid capping the well and claim the well can't be capped when, in reality, what they may be trying to do is buy more time until they can lower a
"capture containment device" onto the well head that can direct all the out-flowing crude oil to BP's awaiting tanker ships.

In talking to the people face to face here on Gulf Coast, I learned that Gulf Coast people don't trust BP, and they don't trust the company's intentions. Today was the first I had heard of the BP agenda to "keep the well flowing" yet suddenly this theory makes sense. BP, after all, went through all the trouble and expense to drill the well. Why wouldn't they want to cash in on the crude oil coming out of it?

To collapse the well and plug it for good would destroy BP's chance to siphon off oil and sell it for profit (until at least August, when the pressure relief wells are expected to be completed). And that is perhaps the single most important reason why oil is still flowing out of that well right now.

As one person I interviewed today put it, "Why should a British petroleum company care about what happens to America's shores?" After all, the financial payoffs to the businesses hurt by the spill may pale in comparison to the billions of dollars in profit to be had from tapping -- not capping -- the well and turning crude oil into raw cash.

There will be more to this story. Let's see if the mainstream media picks up on this angle.

By the way, I don't yet have conclusive proof that BP's intentions are to avoid capping this well. It's just a working theory based on people I've talked to here on the Gulf Coast who appear to know what they're talking about. BP would obviously deny this, but then again BP has denied many things that we know to be true (like the fact that the beach cleanup crews specifically cleaned the beach on Grand Isle before Obama showed up, then left promptly as soon as he left).

If you haven't yet, check out my CounterThink Cartoon on the BP oil spill at [www.CounterThink.com](http://www.CounterThink.com)

Also, watch for video interviews with the people on the Gulf Coast. We'll be publishing them here on NaturalNews starting as early as tomorrow.

I'm headed to New Orleans tomorrow to check out the local scene there and see what else I can find out by talking to the locals on the front lines.

**About the author:** Mike Adams is an award-winning natural health author with a strong interest in personal health, the environment and the power of nature to help us all heal. He is a prolific writer and has published thousands of articles, interviews, reports and consumer guides, reaching millions of readers with information that is saving lives and improving personal health around the world. Adams is an honest, independent journalist and accepts no money or commissions on the third-party products he writes about or the companies he promotes. He is the writer and singer of 'I Want My Bailout Money,' 'Don't Inject Me' and other popular hip-hop songs on socially-conscious topics. He's also the CEO of a highly successful email newsletter software company that develops software used to send permission email campaigns to subscribers. Adams is currently the executive director of the Consumer Wellness Center, a 501(c)3 non-profit, and regularly pursues cycling, nature photography, Capoeira and Pilates.
