Geoengineers and others meeting at San Diego Convention Center for their annual [American Association for the Advancement of Science \(AAAS\)](#) conference session entitled "Can Geoengineering save us from Global Warming?" on Saturday, February 20th will be countered by a demonstration of human rights defenders, environmentalists and others opposing [geoengineering](#).

Geoengineering, the [artificial modification of the earth's climate systems](#), is an [environment modification \(ENMOD\) science](#) for the "deliberate manipulation of natural processes - the dynamics, composition or structure of the Earth, including its biota, lithosphere, hydrosphere and atmosphere, or of outer space that can be applied as a weapon of mass destruction."

Geoengineering projects range from declassified experimentation, such as dumping particles into the oceans to attract algae that sequesters carbon and theoretically slows

global warming, to highly classified experimentation such as aerosol spraying.

Groups from several nearby states are coordinating to attend the demonstration according to [Geo-engineering Watch](#), a California based group.

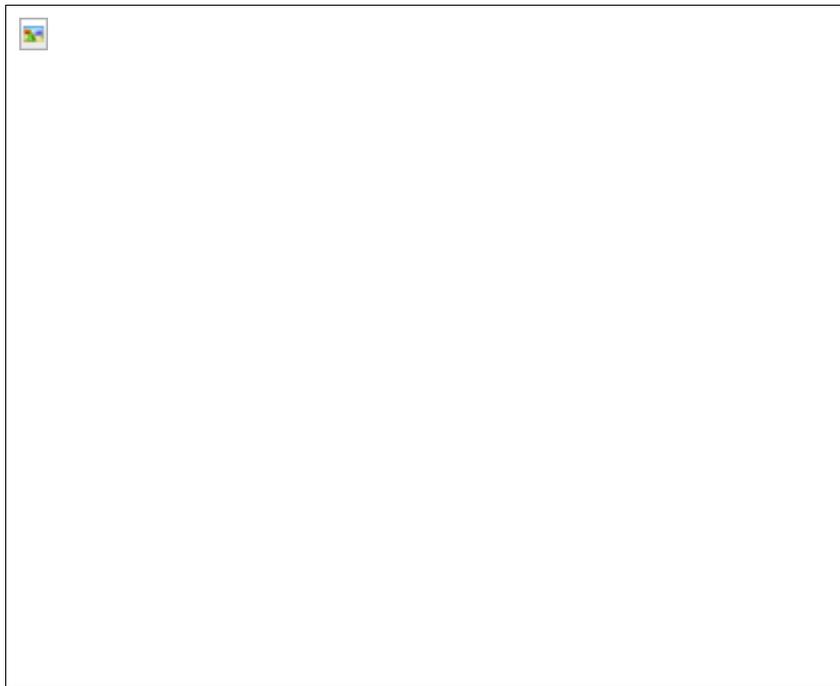

Speakers at the demonstration rally include a solar power expert, Dane Wigington of Norcal Citizens for Clean Air,

Deborah Whitman of Environmental Voices, Dr James Collins (Eco Psychologist) and others.

Ken Caldeira, a leading GE scientist, well known for his appearance on the Discovery Channel, will be a speaker at the Geoengineer conference.

Geo-engineer Watch stated that Caldeira is believed by many geo-engineer watchers as a consultant scientist to a US military aerosol spraying program, based on a patent from Hughes Aircraft. (Chang et al, [Stratospheric Welsbach seeding for reduction of global warming, March 26, 1991, United States Patent: 5003186](#))

Citizens learning about geoengineering oppose it, including what geoengineers refer to as "Stratospheric Aerosol Spraying Geo-Engineering," commonly called "chemtrails."

The three publicized GE presentations at the AAAS meeting include:

The geo-engineer [website highlights the plan](#) to keep the public in the dark about the technology that includes weapons of mass destruction and spin the technology so voters support it. Geo-engineer Watch urges, "Read what is on their website about what the association scientists think about you" that includes the following:

"The Administration is committed to solving society's grand challenges, with energy, health, and education policy topping the list. President Obama wants science to have a key role in a new, more pragmatic approach to governance. In our constitutional democracy an informed public must be able to judge the performance of those they elect. This requires a triangle comprised of political institutions, the community of experts, and a responsible public, all of whom are well informed. How will the public become informed about energy policy, for example? Studies tell us the public strongly supports energy independence, new sustainable sources, and incentives for energy efficiency. But fewer than half of those interviewed could name a renewable energy source or a fossil fuel, raising the question of how firm the public's views are. Studies show, however, that people make judgments based primarily on their values, belief systems, world views, and emotions. Facts play a much more minor role. ***This gap cannot be bridged by loading the public with facts, or trying to make the public more science literate.*** How should scientists deal with this awkward reality? How can science help create a more rational, pragmatic, and far-sighted society capable of addressing the challenges we face? Are ***new innovative methods required to engage the voters in supporting more rational public policies?*** (Emphasis added)

"Doesn't sound like keeping you in the dark is too far fetched now, is it?" asks Geengineer Watch.

Geo-engineering Terrorism

A 1997 [Earthpulse Press](#) News [Release stated](#), "United States Secretary of Defense William Cohen stated in a press briefing, while commenting on new technological threats possibly held by terrorist organizations: "Others are engaging in an eco-type of terrorism whereby they can alter the climate, set off earthquakes, (and) volcanoes remotely, using the use of electromagnetic waves."

Dr Nick Begich's news release adds: "While the Secretary of Defense suggests this capability might be possessed by terrorist organizations, the U.S. military continues to deny that they also control such technology."

Begich, highlighted in the interview (below) stated in an [interview](#) by Kenneth Burke, "The most important thing that needs to be said in all of this is that 'individuals still matter!' Make a difference by your inquiries to Congress. A handful of us brought this issue out initially, and I can say with knowledge, there is confidence, and, still, within this system (that we live in on planet Earth), the opportunity for creating change still exists.

"Take a position on the issue. Then, do something with it. Don't just sit around and let it roll around inside your head. Actually put it out there and do something with your knowledge.

"HAARP is not the only system available for taking advantage of these new technologies. The military has developed smaller weapons systems for use in battlefield applications. These new weapons were disclosed in documents authored and compiled by the United States Air Force. The documents indicated that these weapons can be used for mind control, for inducing heart attacks, causing electronic failures and creating computer malfunctions. More recently, information about these new weapons has been revealed in International Red Cross documents and in other press reports. In a CBS 60 Minutes broadcast on February 11, 1996, a report on some of these new

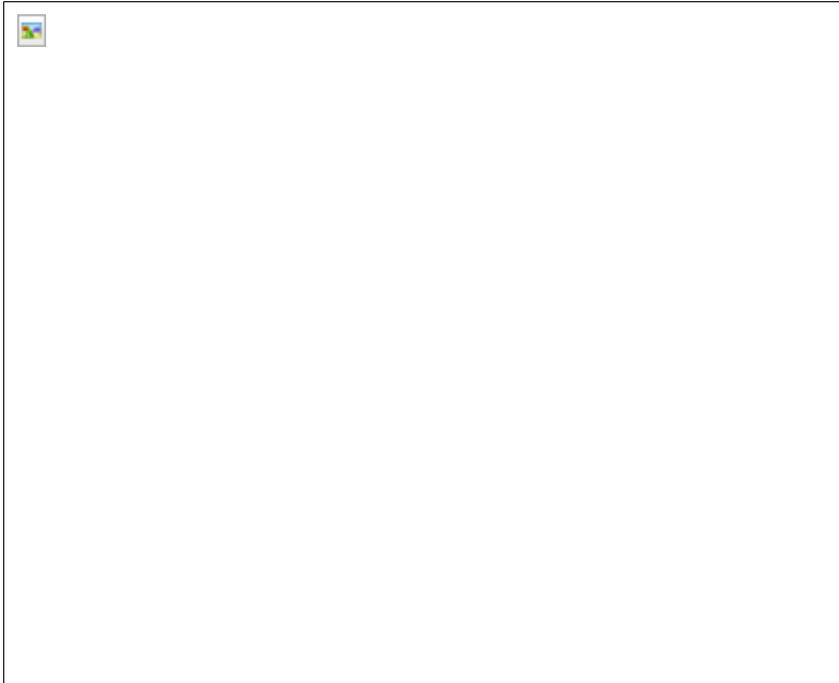

systems was shown. The CBS program discussed some of the effects of these new weapons which included disorientation and flu-like symptoms being caused.

"This new classification of weapons has created some level of concern by military planners, to find a way to introduce these systems (into our society). The United States Army has developed a concept called the 'Revolution In Military Affairs (RMA)' which begins to unfold the weapons introduction plan. What this document points out is that many of these weapons will operate in a way which is in conflict with American values.

"The document reveals that the Army acknowledges the conflict with American values and openly discusses the problem that this presents. The document then describes a number of ways to reshape those values so that these new weapons can be used! The basic problem, from my perspective, is that the U.S. Army's role in the American scene is not intended to shape and form public values. Rather, it is supposed to "reflect" American values. The idea that any branch of government should see their role as one of 'setting' the national ethic (rather than reflecting it) is, in my opinion, wrong!" states Begich.

Oliveira stated today, "Join us in San Diego (February) and in Monteray (March) as the citizens get in the face of the scientists who willingly and blindly go along with the destruction of our environment."

For more information, contact Mauro Oliveira, Geoengineeringwatch.org, 530.356.7343 and tune into the Dr. Begich interview by Alex Jones below in which he covers the variety of social and science issues related to geoengineering.
