REPORTING OBSERVATION

Registered GLOBE Teachers

If you are already a GLOBE teacher, please go to the GLOBE website www.globe.gov, and click on "GLOBE schools Log-in". In the left column, click on "Data Entry". If you are only reporting cloud/contrail data, then click on "Atmosphere/Climate" and select "Cloud Observations". If you are entering additional atmosphere data, you will select the "Atmosphere: One Day" data entry form instead.

As with all GLOBE protocols, you must first have an atmosphere standard defined before you can enter data.

Non-Registered GLOBE Teachers

If you are not a GLOBE teacher the first step is to become trained in one or more of the GLOBE protocols. If you are interested in reporting cloud/contrail observations, it is suggested that you receive training in the Atmospheric Protocols. Because GLOBE accepts scientific quality data only from trained participants, you must send in data. To look for a workshop near you, visit the GLOBE website www.globe.gov, click on the "Educator's" button located in the left sidebar, then open the "Teacher workshops" section of this page are instructions for enrolling in a workshop and, if a workshop is available, for contacting the GLOBE U.S. Partner Coordinator near you. If you are not in the US, click on the Countries link in the left sidebar to find a GLOBE contact in your country.
